ABSTRACT

This thesis is talking about the influence of first language for singers in pronouncing English songs. The goal is to find which phonemes are highly influenced by first language, to find whether singers can sing English song in good pronunciation or not, and to find if level of education affects the pronunciation. The subject of this research is worship leaders and singers at GBI Taman Aries. Each singer was asked to sing three songs and the writer recorded the song with digital player. The writer did not give limitation to singers how many times they wanted to listen to the songs because it was hard for the singers to sing the songs with only two or three times listening. As result, first language did influenced the way singers sang the song because the transcription for most singers were different from what it should be.

Keywords: first language interference, phonemes, English songs.
