E-commerce fast development as a start of global information makes it useful in capital market transactions. Due to the e-commerce popularity, Internet gives more information to investors and makes the investors for them to involve in the Indonesian Capital Market transactions. Many foreign capital markets have used e-commerce in supporting transactions, for example the use of multimedia like texts, pictures, animations, graphics, and sounds.

This thesis covers the impacts of e-commerce in the Indonesian Capital Market especially in listed public companies. The impact will begin from Past, Present and future Indonesian Capital Market. This research also covers on which part on public listed companies that will be impacted by e-commerce as well as the pro and con of the implementation of e-commerce in the Indonesian Capital Market.

Questionnaires are used in this thesis. These questionnaires were sent to many public listed companies. Varied analysis was used for testing, while chi square analysis, soft system methodology were used to understand about the relation of various factors that have some effects on e-commerce system.
