ABSTRACT

This research is conducted to know the contribution of Internet in learning process to successful study of university students. The objective of this research is to test a hypothesis whether the learning process based on Internet, bring contribution to successful study. To test the hypothesis, Statistic approach has been used in this research. The variables are used in this research are; Learning Process and Students Ability as independent variables and Learning Successfulness as dependent variable. Those variables are analyzed by using regression linear. The result of research shows that there is contribution of Internet in learning process to successful study.

Keywords: Internet, Learning Process, Learning Successfulness
