Abstract
Objectives
Our objective is to create a course planner that can plan courses to take for active students and transfer students. Currently, it is doing manually and takes time to generate a study plan.

Method
The research and design method conforms to the SDLC (System Development Life Cycle) methodology. The sampling method is done by conducting a survey among BiNus IUP Program Manager and BiNus IUP students.

Results
We found that students need to plan their study if they fail a course. For transfer students, currently it is doing manually to generate the study plan and it takes long time.

Conclusion
By implementing the system, active students can plan their study until it ends at BiNus IUP, and Program Manager can generate the study plan for transfer student faster.

Key words
- Active student, transfer student, study plan
